

Musway M4nano

EXPERT GROUP
In-Car Electronics

AWARD YEAR
2026-2027

— THE CITATION

Engineered to bring high-performance sound to vehicles where installation space is limited, Musway's M4nano retains the strengths of its earlier M4 model, but in a more compact format.

Utilising efficient Class D amplification, it delivers 4 x 55W into 4 ohms, with the option to bridge to its output to 200W, enough power to efficiently drive a subwoofer.

Furthermore, the M4nano partners its eight-channel DSP processor with six high-level and preamp inputs, four amplified outputs and four pre-outs, allowing configurations ranging from a four-speaker system to an active front-facing system with external subwoofer amplification.

Add in Musway's intuitive and comprehensive installation software, plus the amplifier's plug-and-play wiring compatibility and compact size, and the M4nano becomes the ideal solution for discreetly enhancing the performance of any OEM system.
